LABORATORY COMMENTS & INTERPRETATION

Glucose Alert: Fasting blood glucose is elevated above standard baseline levels, which may indicate impaired fasting glucose or insulin resistance. Clinical correlation with an HbA1c test is strongly recommended.

Lipid Alert: Total cholesterol, triglycerides, and LDL are outside optimal therapeutic targets. Recommend nutritional modification and follow-up clinical cardiovascular assessment.

Platelets Alert: Platelet count is slightly below the normal physiological reference range (mild thrombocytopenia). Re-testing in 2-4 weeks is advised to rule out transient deviations.
